

Sabeco-Simply Zentyal Success Story

Sabeco-Simply uses Zentyal as the core of their network infrastructure

SABECO-SIMPLY

Sabeco-Simply is a Spanish supermarket chain integrated in the French Auchan Group. The company was founded back in 1960 and it was the first ever self-service supermarket in Spain.

Currently Sabeco-Simply operates 126 supermarkets and hypermarkets, 117 associated establishments and 17 petrol stations located in nine different autonomous communities in Spain. The company employs approximately 6,000 people and has a €1 billion annual turnover.

IMPLEMENTATION CHALLENGE

As Sabeco-Simply has grown over the years, their business has become ever more dependent on the flawless functioning of their IT infrastructure. In order to continue providing efficient and high-quality services at the appropriate cost, Sabeco-Simply's IT Department has opted for implementing OSS strategy and solutions since few years ago.

When it came to choosing a network infrastructure server, after evaluating several open source alternatives, they selected Zentyal because it was the most robust and efficient solution available. Also, the election was supported by the fact that they could count on high-quality local commercial support and services.

SABECO

SIMPLY

"Zentyal provides the perfect blend of an enterprise level network infrastructure server and a cost-effective technology solution, allowing us to respond to ever-higher demands at the appropriate cost".

Luis Palomero
CTO, Sabeco-Simply

IMPLEMENTATION SOLUTION

Sabeco-Simply opted for Zentyal when it became necessary to update their Linux servers that were working as router, DNS and DHCP servers for the whole company network with over 2,000 users. These network services are considered mission critical for Sabeco-Simply's business as all communications in the company are managed through them.

Zentyal was deployed in high-availability mode on two machines, first in limited environment and after exhaustive testing, successfully in production environment. Once proven Zentyal's success as a network infrastructure server, Sabeco-Simply has decided to migrate also other network services to Zentyal.

ZENTYAL INFRASTRUCTURE

Zentyal Infrastructure manages and optimizes the internal traffic within the computer network, including the configuration of domain server and the management of machines and digital certificates.

Technical features:

- Network interfaces on several VLANs
- DHCP server
- DNS server
- Certification Authority & Virtual Private Networks
- Web server
- NTP server
