Zentyal 2.2, a major new release of the Linux Small Business Server available for download

Press release:

Zentyal 2.2, a major new release of the Linux Small Business Server, now available for download

Publication date

14th of September, 2011

Summary

The general availability of Zentyal 2.2, the Linux small business server, was announced today

Zentyal 2.2 introduces major performance improvements, reducing the installation time and improving the user interface responsiveness by 30%

This version also integrates new features such as captive portal, IPsec and PPTP support, Zarafa 7 and many other, making Zentyal a complete server solution for small and medium businesses

(Zaragoza, Spain) The Zentyal Development Team announced today the release of Zentyal 2.2, a new major release of the Zentyal Linux small business server. Zentyal aims at providing small and medium businesses a professional, reliable and secure server solution, that is yet easy to use and affordable.

Zentyal 2.2 introduces major performance improvements, reducing the installation time and improving the user interface responsiveness by 30%. Besides, a number of usability improvements have taken place, making the server installation, configuration and management easier and more accessible for SMB users with no earlier experience on Linux.

This version features fully new Captive Portal module, that offers the possibility to limit user access to the Internet through a login page. Captive portals are typically used at WiFi hotspots, but also in wired networks at hotels, schools or airports where users need to authenticate prior gaining Internet access.

In addition, Zentyal 2.2 introduces a bunch of new features, such as IPsec and, PPTP support, Administrator audit logging, Virtual machine management, Zarafa 7 integration, Ad-blocker or the ability to run Zentyal from a USB stick. Moreover, to celebrate the new release, improved free Basic Subscription was recently launched to give users access to basic alerts, reports, remote monitoring and management options directly from the Zentyal Cloud at no cost.

Zentyal users are invited to participate in Zentyal Summit 2011, to be held on November 11-12, to learn more about this version and discuss the roadmap of the next stable Zentyal version.

About Zentyal (www.zentyal.com)

Zentyal, developer of a Linux server of the same name, aims at providing small and medium businesses a professional, reliable and secure server solution, that is yet easy to use and affordable. To reach this goal, the company develops Zentyal server and provides support, services and solutions based on Zentyal server either through Authorized Partners or directly to end customers.

The Zentyal Linux server development began in early 2004 and today it is the open source alternative to Windows Small Business Server. Currently Zentyal server gets about 1,000 daily downloads and the project has an active community of more than 5,000 members. Likewise, it is estimated that there are over 50,000 active Zentyal installations all over the globe.
