Press release: eBox Technologies launches certified on-line training in eBox Platform

Publication date

21st of September, 2009

Summary

eBox Technologies launches certified on-line training in eBox Platform, aimed at IT professionals interested in computer network management with eBox Platform and Linux based systems.

(Zaragoza, Spain) eBox Technologies, announced today the launch of certified on-line training in eBox Platform, the open source unified network server for SMBs. The first on-line training course "eBox for Network Administrators" that is available both in English and in Spanish, is now open for registration.

"We have received numerous requests for training in eBox Platform from prospective students all over the world since we launched our Training services. To respond to this demand, we have opted for offering the most popular course on-line" said Ignacio Correas, CEO of eBox Technologies. "As eBox Platform unifies all the network management services in one single open source platform, many system administrators find it an interesting choice to save time and to increase security."

The eBox for Network Administrators is an intermediate course aimed at IT professionals, for example, Windows system administrators with basic knowledge on computer network management and with some experience in the administration of Linux based servers. This course provides the students with hands-on experience, practical exercises and real-life simulations allowing them to understand the concepts behind computer network management and efficiently administer small and medium enterprises' computer networks with eBox Platform.

About the eBox for Network Administrators course

The course will take approximately 40 hours to complete and the students will have up to 30 days to complete the contents and exercises. It is an intermediate level course and therefore the students are requested to have some experience in computer network management with Linux based servers and to have installed and configured eBox Platform using virtualization technology. The cost of this on-line course is 445€.
