

Zentyal launches a new Service Pack to offer improved Microsoft® Exchange Server compatibility

Zaragoza (Spain), 8 May, 2014

- *Zentyal launches the Service Pack 2 to offer improved Microsoft® Exchange Server compatibility*
- *Service Pack 2 features support for Autodiscover and ActiveSync®, together with a new webmail UI*

Zentyal, developer of server technology natively interoperable with Microsoft® server products, announced today the launch of the Service Pack 2 (SP2) for Commercial Zentyal Server Editions (version 3.2). This Service Pack offers improved compatibility with Microsoft® Exchange Server, making it increasingly easy to migrate seamlessly from existing Microsoft® environments to Zentyal without causing any downtime or change for the users.

The Service Pack 2 features support for Autodiscover and ActiveSync®, together with a new webmail UI. Thanks to the Autodiscover support, Microsoft Outlook® users are able to configure their desktop clients with minimal input, simply by inserting their email address and password. By adding support for ActiveSync® - through integration of the Z-Push and SOGo Active Sync - users are also able to synchronize email on their mobile devices. And the new webmail user interface offers users modern, AJAX-based webmail, similar to other mainstream webmail services like the ones offered by Microsoft Outlook®, Gmail™, Yahoo® and others.

*"Many well-loved and extensively used Exchange products are reaching end of their extended support in 2014. Technological independence, higher efficiency and lower costs are some of the main reasons businesses mention when they search for alternatives to the solutions offered by Microsoft" said **Ignacio Correás, CEO of Zentyal**. "However, costly migrations and impact on end users are out of the question and this is just what Zentyal helps to avoid".*

Zentyal is the only vendor worldwide that uses the native Microsoft® protocols, both for groupware (Microsoft® Exchange MAPI) and directory management (Microsoft Active Directory®) in its server products. This makes Zentyal the second company – besides Microsoft® – to offer solutions that implement these protocols that currently form the very core of any business IT infrastructure. Thanks to this native compatibility, Zentyal can be transparently introduced to an existing Microsoft® environment, where it can seamlessly integrate with and gradually replace the existing servers.

How to Request a Trial

Interested end users and resellers can request a free 30-day Zentyal for SMBs Premium Edition-Trial through the URL mentioned below. The Trial offers access to the latest full Commercial Zentyal Server Edition (Zentyal 3.2 SP2), including 25 GB of storage space for the Cloud File Sharing service, Disaster Recovery service, full software and security updates and full access to the remote monitoring and management platform.

About Zentyal

Zentyal designs and develops easy-to-use and affordable IT infrastructure since 2004. Zentyal is the only vendor worldwide to offer server technology that is natively interoperable with both Microsoft Active Directory® and Microsoft® Exchange Server, giving businesses of all sizes the first real alternative to move their IT infrastructure transparently from Microsoft® to other solutions that fit their needs better. Zentyal is purely channel oriented company, selling its products, services and solutions only through its global partner network.
